

GMW 3172 – IP WATER CODE 9.4.8 PAGE 91

SS4000 series is designed to perform automatic test and meet GMW 3172 standard. Which simulates the exposure of the components to salt spray (IP water code) with a continuous monitoring, during the time that the component is energized. The detailed inspection is done of damaged interior electronics, loss of parent metal that may lead to loss of internal or external electrical connections and concentrated pitting corrosion.

The different components locations of the car (IP water code) have different time of test duration.

Note: Do not mix standard salt fog with GMW 3172. The GMW 3172 asks spraying solution directly above the DUT.

Mode: SALT SPRAY (IP WATER CODE)

Mode: SOAK

- Touch Screen
- Acquisition data via SD Card
- Easy programming
- Available in volumes 600 – 1,300 – 3,000 and 5,000 liters (Others on request)
- Construction according to UL508a

All electrical components used are UL listed.
